## Invitation to a Demonstration of **Boat Bottom Washwater Recycling System: Evaluating Options for Your Marina**

**Friday, April 18, 2008 • 1:00 PM**

**Manchester Marine, Inc.** and **Ransom Environmental Consultants, Inc.** invite you to attend a **free demonstration** of a boat bottom washwater recycling system recently installed at Manchester Marine to eliminate the discharge of process wastewater to the environment.

**Boat bottom washwater is classified as an industrial discharge** by the U.S. EPA because of pollutants contained in the anti-fouling paints used on boat bottoms. The U.S. EPA is encouraging the marine industry to eliminate the discharge of process wastewater entirely. Therefore, marina operators need to evaluate options such as collection, treatment, and off-site disposal of boat bottom washwater, or non-discharging (closed-loop) recycling systems as ways of achieving regulatory compliance.

### **Demonstration Highlights:**

- See a boat bottom washwater recycling system firsthand
- Learn the pros and cons of installing a recycling system at your facility
- Benefit from lessons learned by Manchester Marine and Ransom

**Place:** Manchester Marine, Inc.  
17 Ashland Avenue  
Manchester-by-the-Sea  
Massachusetts

**RSVP** to Mac Donaldson at
